

SURESPAN

CASE STUDY:

The Burj Khalifa, Dubai

Surespan's on top of the world

Burj Khalifa set a new global record at 818 meters high, being named the tallest building in the world. The spire was erected in the third week of December 2008, since then a beacon has been added installed on the top, usually the topping out of a tower.

Surespan is proud to be involved in such an achievement having supplied Burj Khalifa with a 600mm diameter, polished grade 316 stainless steel simulated submarine access hatch with handwheels, located two meters from the top at 816 meters and is used for maintenance access to the aircraft warning lights. The team at Surespan was selected because of their engineering expertise and unique skills.
